

# The Mobile Phone; Changing our behaviors and socialization

Keilee Smith, Anthropology-Senior.  
Department of Anthropology and Sociology.

## Abstract:

The main point of this research is to understand awareness of the object relationship between the mobile phone and how it affects our social behavior. I conducted two sets of personal interviews, with a week in between each interview set. The purpose was to recognize cognitive behavior change within the object relationship. The results concluded that the object relationship was relevant for socialization and changed behavior and the object was dependent on human interaction which complies with an assistant or companion role.

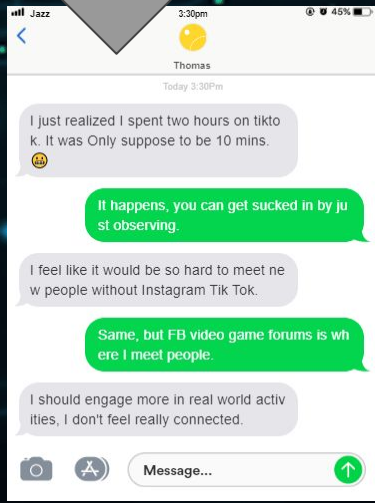

The methods of data was personal interview sets, with three different individuals, two males and one female. Two interviews with a week in between intake. Results: The study conducted revealed the object does change how we socialize and view ourselves in society. Each participant that recognized their actions and changing behaviors based on the phone immediately started to change the way they thought about phones.

The Object relationship affects WVU Students too, we are constantly in an engaging social need for education and community. The mobile phone has a role to play for each student. Especially during Covid-19 technology has become a primary communication for safety but it does have an affect on our behavior and how we feel connected with each other.

Our Object relationship with the Mobile phone has an impact on the way we socialize. The cellphone structures behavior within its use. Every time we access the internet we are changing our thinking patterns.

Technology Changes with the society over time. The phone becomes more vital with its complexity of roles. -> The Text Message conversation is answers from participants in the Study and how they felt about the role of their phones. Interview Data, Smith, 2021.

## Conclusion:

Our society uses the mobile phone as a multi faucet tool. The social use of the cell-phone is much more and dictates our cultural narratives as well as expression of creativity and art. In Conclusion the research shows the the Object relationship affects our behavior while using the mobile phone
